plt.imshow(high_pass_img, cmap='gray')
plt.title("High-Pass Filtered")
plt.axis("off")

plt.tight_layout()
plt.show()
```

Observations: All the image information is present in the original image. Magnitude Spectrum indicates the frequencies of the image. Low Pass filter gives smooth image by eliminating high frequencies from the image. High Pass filter highlights the edges and finer details in an image.

Conclusion: Fourier transform has been applied successfully on the image, and Low Pass and High Pass Frequency filters have been done successfully.
